

Acknowledgments

The production of a book that includes as much information as *The Disaster Handbook* owes its existence to many individuals and organizations. This is the fifth version of this Handbook, and it has been expanded significantly in order to serve the needs of a national audience.

With the advent of the World Wide Web, much information that was hard to get is now available through desktop computers. For example, many documents in this book were adapted from materials produced by the Federal Emergency Management Agency (FEMA) downloaded from their Web site.

In addition, we found the handbooks produced by the University of Wisconsin Extension Service and St. Martin County, Florida especially helpful. Other materials came from Florida's Division of Emergency Management, from the Texas Extension service Disaster Handbook, the Chimney Safety Institute, the Illinois Emergency Management Agency, and the book *Stress and Coping with Disaster: A Handbook Compiled Following the Midwest Flood of 1993 for Extension Professionals*.

We'd like to extend special thanks to the U.S. Department of Agriculture Cooperative State Research, Education, and Extension Service for generous grant support. These funds allowed us to make *The Disaster Handbook* available in print, CD-ROM, and over the Internet at <http://disaster.ifas.ufl.edu>.
